¿Qué es la desambiguación del autor?

La ambigüedad del nombre es un problema frecuente en la comunidad académica:

- Diferentes investigadores publican bajo el mismo nombre
- Los investigadores individuales publican bajo varios nombres
- Los idiomas y las convenciones de nomenclatura cultural presentan desafíos adicionales.

La desambiguación del autor es un proceso que tiene como objetivo encontrar todas las publicaciones que pertenecen a un autor determinado y distinguirlas de las publicaciones de otros autores que comparten el mismo nombre.

HECHO: Apenas una centena de apellidos puede representar más del 85% de los 1.300 millones de ciudadanos de la Republica China. Los tres primeros, Wang, Li y Zhang, cubren más del 20% de la población.

¿Por qué Publons?

La Web of Science fue pionera con la creación de **ResearcherID** y la atribución de un único identificador para los autores.

2007

La Web of Science apoyó **ORCiD** desde su inicio. El concepto, el código y una parte de la financiación provinieron de ResearcherID.

Group

Los datos de ResearcherID migraron hacia Publons. Web of Science Group está invirtiendo en Publons para desarrollar una plataforma completa con los perfiles de los investigadores, que además se integrará con las demás soluciones de la Web of Science.

Publons fue la primera plataforma ofreciendo un servicio gratuito a los investigadores para hacer visible sus trabajos editoriales y de revisión por pares. Publons hace parte del grupo Web of Science desde 2017.
