SAME En las búsquedas de direcciones, use el operador SAME para restringir su **Buscar en el campo Dirección** búsqueda a términos que aparezcan en la misma dirección en un registro completo. Use paréntesis para agrupar sus términos de direcciones. Por ejemplo: AD=(McGill Univ SAME Quebec SAME Canada) busca registros en los que McGill University aparece en el campo Direcciones de un registro completo junto con "Quebec" y "Canada". Buscar en: Colección Principal de Web of Science ~ AD=(Portland SAME Oregon) busca registros en los que "Portland", "Oregon" u "OR" (abreviatura del estado) aparecen en el campo Direcciones de un registro. DOCUMENTOS AUTORES REFERENCIAS CITADAS Tenga en cuenta que el operador SAME funciona exactamente como AND cuando se usa en otros campos (por ejemplo, en los campos Tema y Título) y cuando los términos aparecen en el mismo registro. Por ejemplo: Dirección univ SAME murcia TS=(cat SAME mouse) devuelve los mismos resultados que TS=(cat \sim AND mouse). + AÑADIR FILA Búsqueda avanzada BUSCAR × BORRAR Publicaciones de varias instituciones ³ Univ Politecn Cartagena, Murcia, Spain ² Catholic Univ Murcia, Murcia, Spain ² Univ Murcia, E-30001 Murcia, Spain Afiliación Afiliación Afiliación Universidad Politecnica de Cartagena Universidad Catolica de Murcia University of Murcia

¿Por qué después de refinar una lista de documentos por "tipología = artículos" todavía tengo otros tipos de documentos?

Ejemplo

Document Types	~
Articles	80,902
Book Chapters	1,557
Proceedings Papers	1,295
Early Access	448
Data Papers	83

Porque un documento puede estar indexado con varias tipologías

ROUTLEDGE HANDBOOK OF POSITIVE COMMUNICATION:					
HAPPINESS AND SOCIAL CHANGE					
Book Series: Routledge Handbooks in Communication S					
Pages: 167-177					
Published: 2019					
Document Type: Article; Book Chapter					

Por ejemplo, los capítulos de libros están siempre indexados como artículos también

Entonces si yo solo quiero una tipología ¿cómo lo hago?

Solución: Excluir las tipologías que no deseo

-		Acceso anticipado
Entender el acces	o anticipado	La función Acceso anticipado indica que un artículo se publicó electrónicamente en una revista antes de asignarlo a un volumen y un número específicos. Estos artículos también se conocen como "artículos en prensa" o "publicar antes de imprimir", en función de la marca del editor.
Filtros rápidos		Estos artículos se pueden encontrar con antelación y están completemente
➡ Highly Cited Papers115➡ ♦ Hot Papers3➡ Artículos de revisión1,098	Probiotic red quinoa drinks for celiacs a probiotic properties during fermentatio	nd indexados, incluyendo una fecha de publicación en línea para el editor. Estos artículos acumulan el número de veces que se citaron en esta fase inicial de publicación, por lo que se conserva el impacto completo del artículo. También se incluye la función Web of Science total, que incluye opciones de alertas y exportación

Article Match Retrieval (AMR) free	Web of Science API Lite free	Web of Science API Expanded subscription				
A publication matching API that enables real-time Web of Science bibliographic search to update citation counts in batch mode or real time, along with producing links back to Web of Science for further discovery and analyses.	A responsive API that supports rich searching across the Web of Science Core Collection to retrieve core article metadata. This service provides a great way to reuse Web of Science data both internally and externally to enhance institutional repositories and research networking systems with best-in-class data.	A robust and comprehensive API that delivers deep detail into the most valuable publication and citation information found in the Web of Science Core Collection. Includes everything in the Web of Science Lite API plus additional metadata, such as author, affiliations, identifiers and funding data.

Accessing our data

Raw Data – Expert Users: Greatest Autonomy, Large and/or Complex Analyses

APIs – "Power" Users: Greater Search and Analytic Autonomy

> WOS Platform – General Users: Basic Search and Analysis

The Raw Data can be loaded into databases, linked with other data sources, and used for the largest and most intricate analyses - utilising a complete set of the data partitioned on years and editions

APIs can be used by more savvy users to do more involved search and analysis, as well as to self serve full record data in smaller batches, and facilitate integration with other systems

Web of Science platform can be used by the lay user for basic search and analysis, as well as export of the smallest sets of data in the least structured format editions

All three levels applicable at any organization, to get the most out of the dataset and maximize efficiency, access and insight.

• Different elevation levels provide flexibility relative to expertise and user cases.
